KEYWORDS

polyprotein; core protein; E1; E2; NS2; NS3; NS4A; NS4B; NS5A; NS5B; envelope protein; non-structural protein; interferon-sensitive; interferon-resistant; IFN-sensitive; IFN-resistant; ISDR; interferon sensitivity determining region; HVR; hypervariable region.

HPCK1S2 LOCUS DEFINITION

Hepatitis C virus (strain HCV-1b,

9410 bp

RNA clone

linear HCV-K1-S2),

VRL 10-FEB-1999 complete genome

The first 23 and last 36 bases of this set of sequences are from
the synthetic oligonucleotides used to generate these PCR products.
Neither the start nor stop codons are naturally present in HCV.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic CC; (3) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC replicon enhanced cells are useful in studying a functional HCV replicon; (5) CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replicons and HCV cells are useful in studying HCV replicons and CC expression, and HCV and host cell interactions, producing HCV RNA and proteins, and providing a system for measuring the ability of a compound to more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is not shown in the especification but was created by the indexer using the HCV sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hepatitis
Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication as

New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication as

Claim 9; Page; 69pp; English

ABSULT 4
ABK91424
ABK The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRSS) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (2) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) CC replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is not shown in the especification but was created by the indexer using the HCV sequence

The invention relates to nucleic acid molecules comprising altered HCV (NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) (CC internal ribosome entry site (IRBS) region coding for one or more NS3, (CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations (CC are detailed in the specification. Also included are (1) an expression (CC vector comprising a nucleotide sequence coding for the altered nucleic cacids, which is transcriptionally coupled to an exogenous promoter; (2) a (CC recombinant cell human hepatoma cell comprising the altered nucleic acids (3) a recombinant cell produced by introducing into a human hepatoma (CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) (CC an HCV replicon enhanced cells are due in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV creplicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and (CC proteins, and providing a system for measuring the ability of a compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B: 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               á
The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region coding for one or more NS3, NS5A, or EMCV IRES mutations, respectively. The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma
                                                                                                                                                                                                                                                                                                               New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 NS5 encoding region, or encephalomyocarditis virus (EMCV) internaribosome entry site (IRES) region, useful in studying HCV replica expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HCV; ds; Con 1; adaptive mutation; liver failure; cirrhosis; hepatocellular carcinoma; NS3; NS5; encephalomyocarditis virus; EM internal ribosome entry site; IRES; NS5A; HCV replication; mutant.
